Lung Transplant

Analytics Report · October 2026 Update

National Insights · ALUA Program Analysis · Policy Impact · Forecasts

PART 1 — NATIONAL ANALYSIS

- National volume 2005–2026 (Jan–Sep)
- DSA & CAS policy impact
- Program quadrant analysis
- Equity & access metrics

PART 2 — ALUA PROGRAM

- Volume history & Southeast peers
- SRTR PSR Jul 2026 & UNOS benchmarks
- Rolling HR surveillance (Oct 4, 2026)
- Offer acceptance, regression & Monte Carlo

OPTN 2005–Sep 30, 2026 (as of Oct 25, 2026) · SRTR PSR July 7, 2026 · Rolling reports Oct 4, 2026 · Offer acceptance Jan–Aug 2026

Web-scraped data

Personal project to apply text /data mining tools with AI help

OPTN-HRSA website:

Used AI-assisted coding to web-scrape lung transplant data for 54 US centers (active adult programs > 3 years)

Period 2005 – Sep 30, 2026 (OPTN data as of Oct 25, 2026)

Key Questions:

How has the U.S. lung transplant system changed over the past 20 years?

How did major allocation policy reforms — DSA removal and CAS implementation — redistribute volume and access across centers?

Where does ALUA stand now — nationally and against Southeast peers — and what are the major surveillance risks for 2026–2028?

Lung transplants by center — OPTN/HRSA, scraped Oct 26, 2026 (2026 = Jan 1–Sep 30)

US Lung Transplant

At a Glance · October 2026 Update

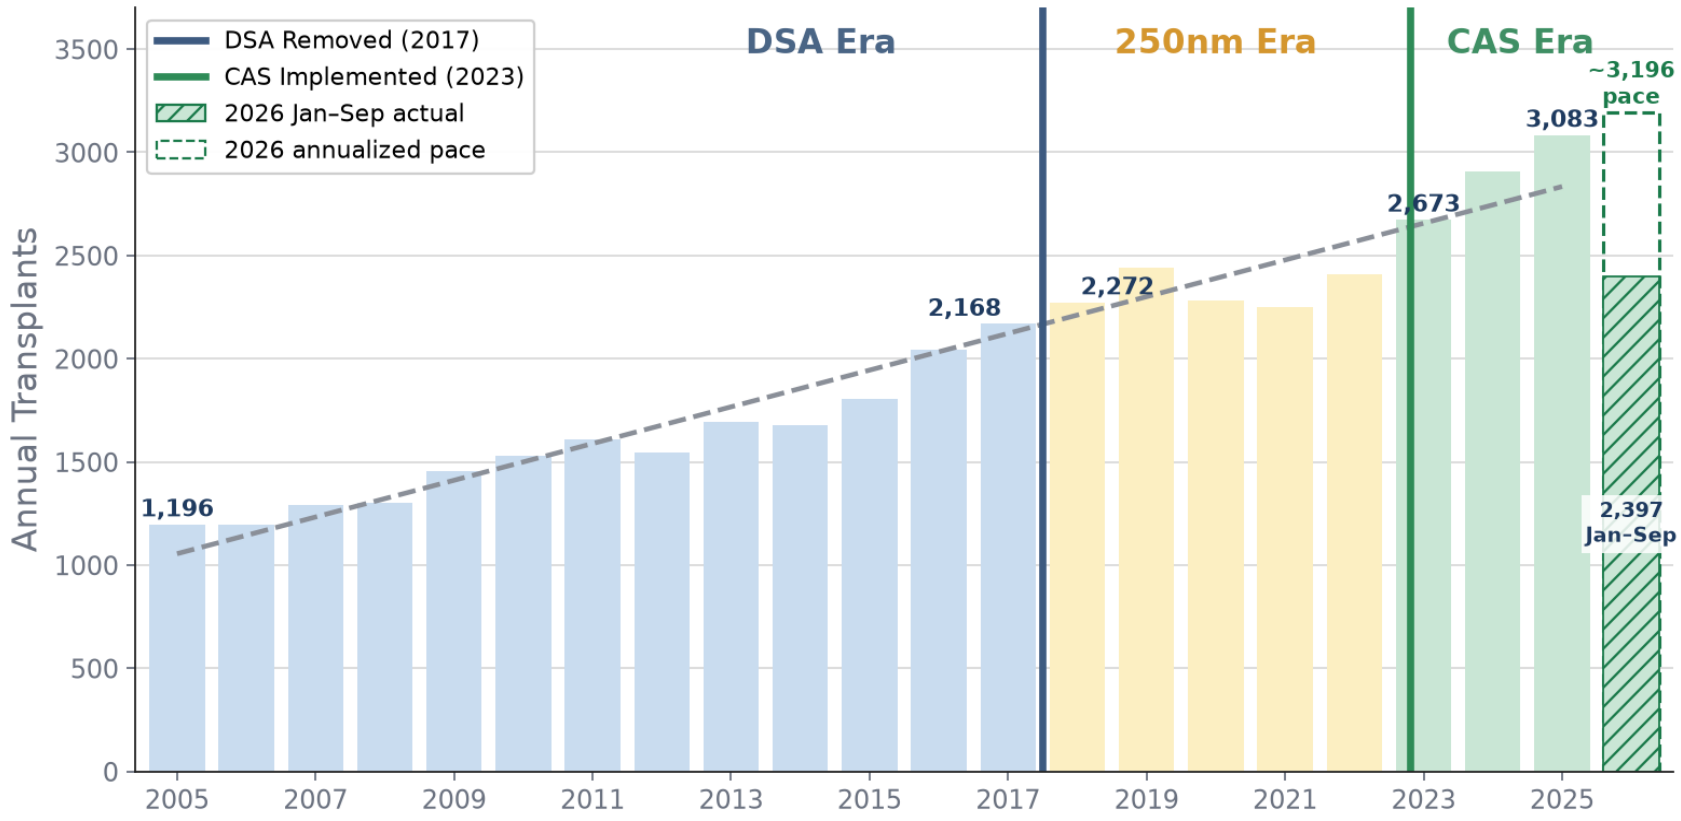

National Insights · ALUA Program Analysis · Policy Impact · Forecasts

3,083	2,397	31	23	90.5%
2025 National Volume	2026 Jan–Sep (US)	ALUA 2025 Volume	ALUA 2026 Jan–Sep	ALUA 1-yr Survival (PSR Jul '26)

OPTN 2005–Sep 30, 2026 (as of Oct 25, 2026) · SRTR PSR July 7, 2026 · Rolling reports Oct 4, 2026 · Offer acceptance Jan–Aug 2026

Part 1 — National Market

US Lung Transplant Volume 2005–2026 (Jan–Sep) with Policy Inflection Points

Era Averages

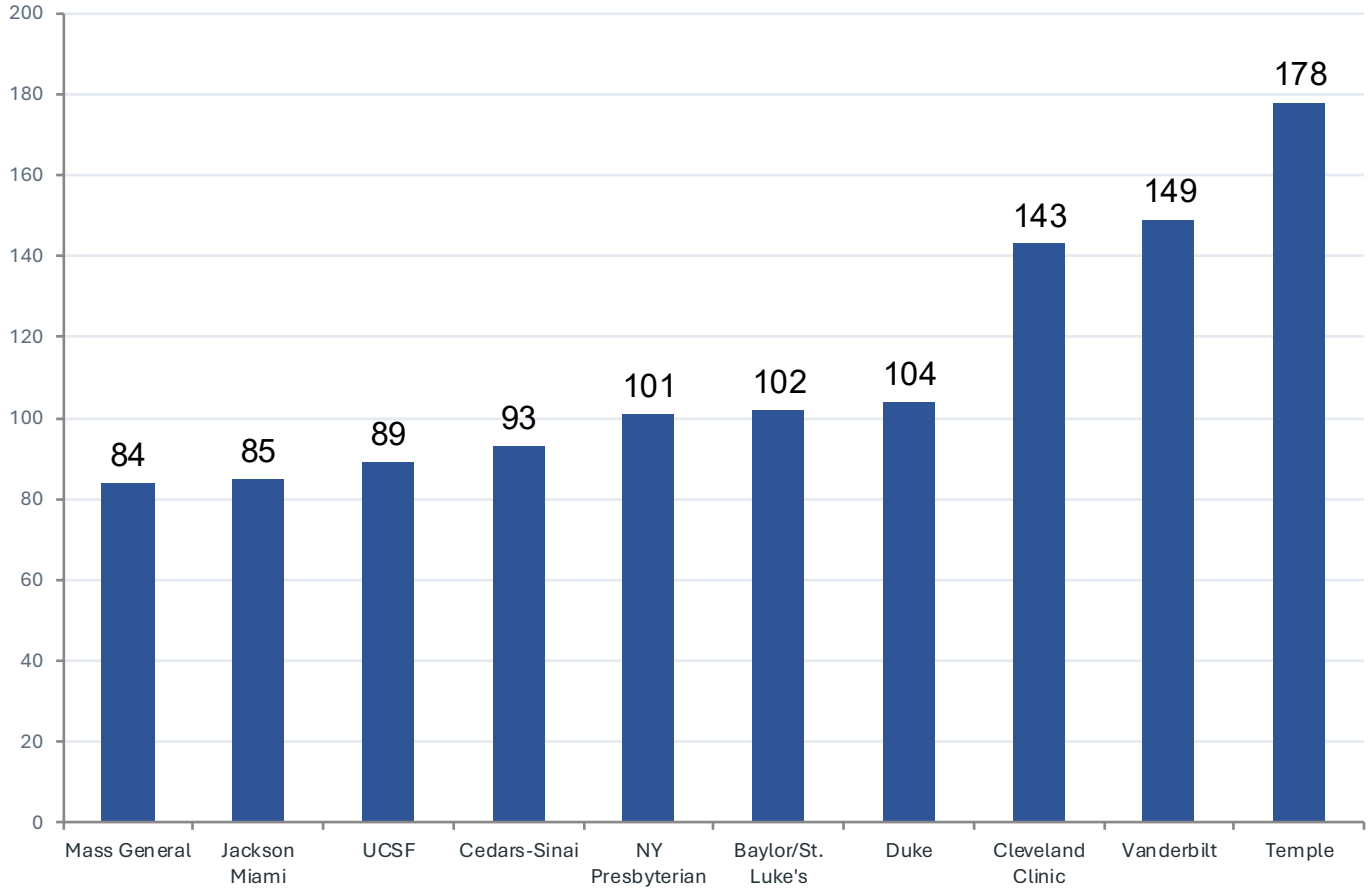

Pre-DSA (2015–17): 2,006/yr

250 NM Era (2018–22): 2,332/yr (+16%)

CAS Era (2023–25): 2,888/yr (+24%)

- **158% growth: 1,196 → 3,083 transplants over 20 years**
- 2023: largest single-year jump (+10.9%) — CAS effect
- COVID 2020 dip (−6.5%) recovered fully by 2022
- Post-CAS slope: +216/yr vs long-run +89/yr
- 2026 Jan–Sep: 2,397 → ~3,196/yr pace (+4% vs 2025) — growth slowing after post-CAS surge

Competitive landscape: concentration is moderate, but leaders matter

Top 10 share of 2025 national volume

36.6%

Largest center

Temple 178

Top three combined

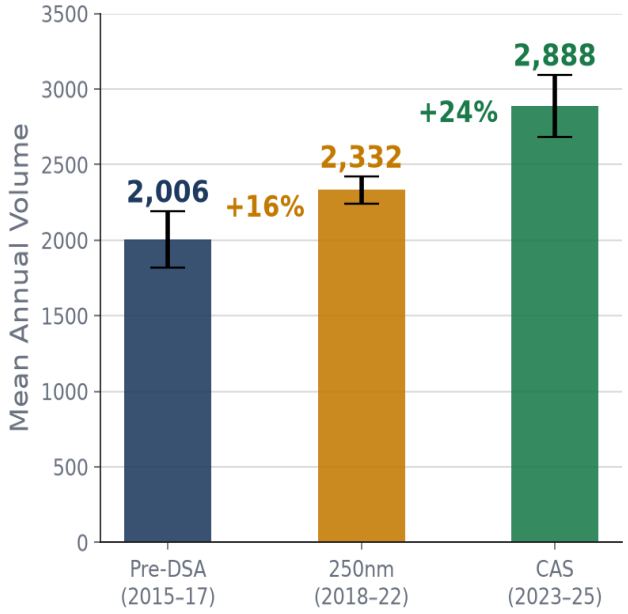

470

Market is not monopolistic, but center-specific capability matters.
Leaders combine referral depth, high-acuity candidate management, donor acceptance, and surgical throughput.
ALUA competes in a system where the benchmark is no longer only local geography.

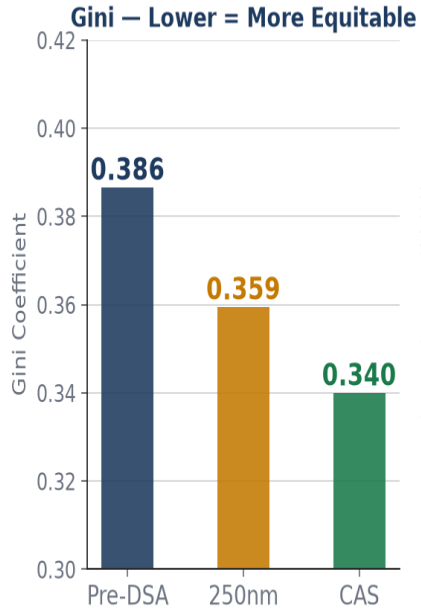

Sources: OPTN/HRSA center data (scraped Oct 26, 2026), SRTR PSR Jan 2026, Rolling SRTR Apr 2026, project analysis.

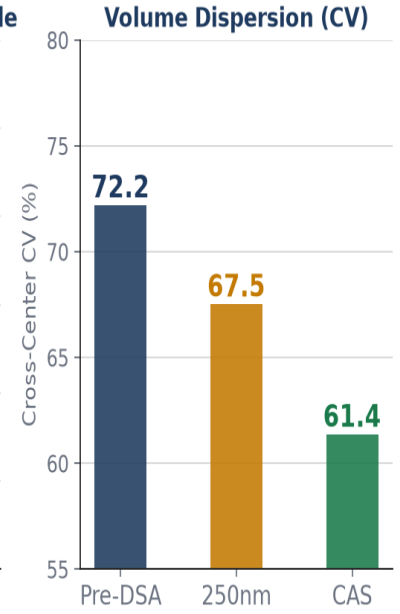

Policy Era Comparison & Equity Impact

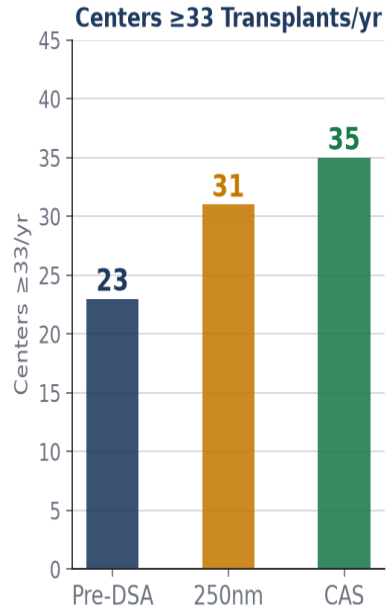

DSA Removal (Nov 2017) · CAS Implementation (Mar 2023)

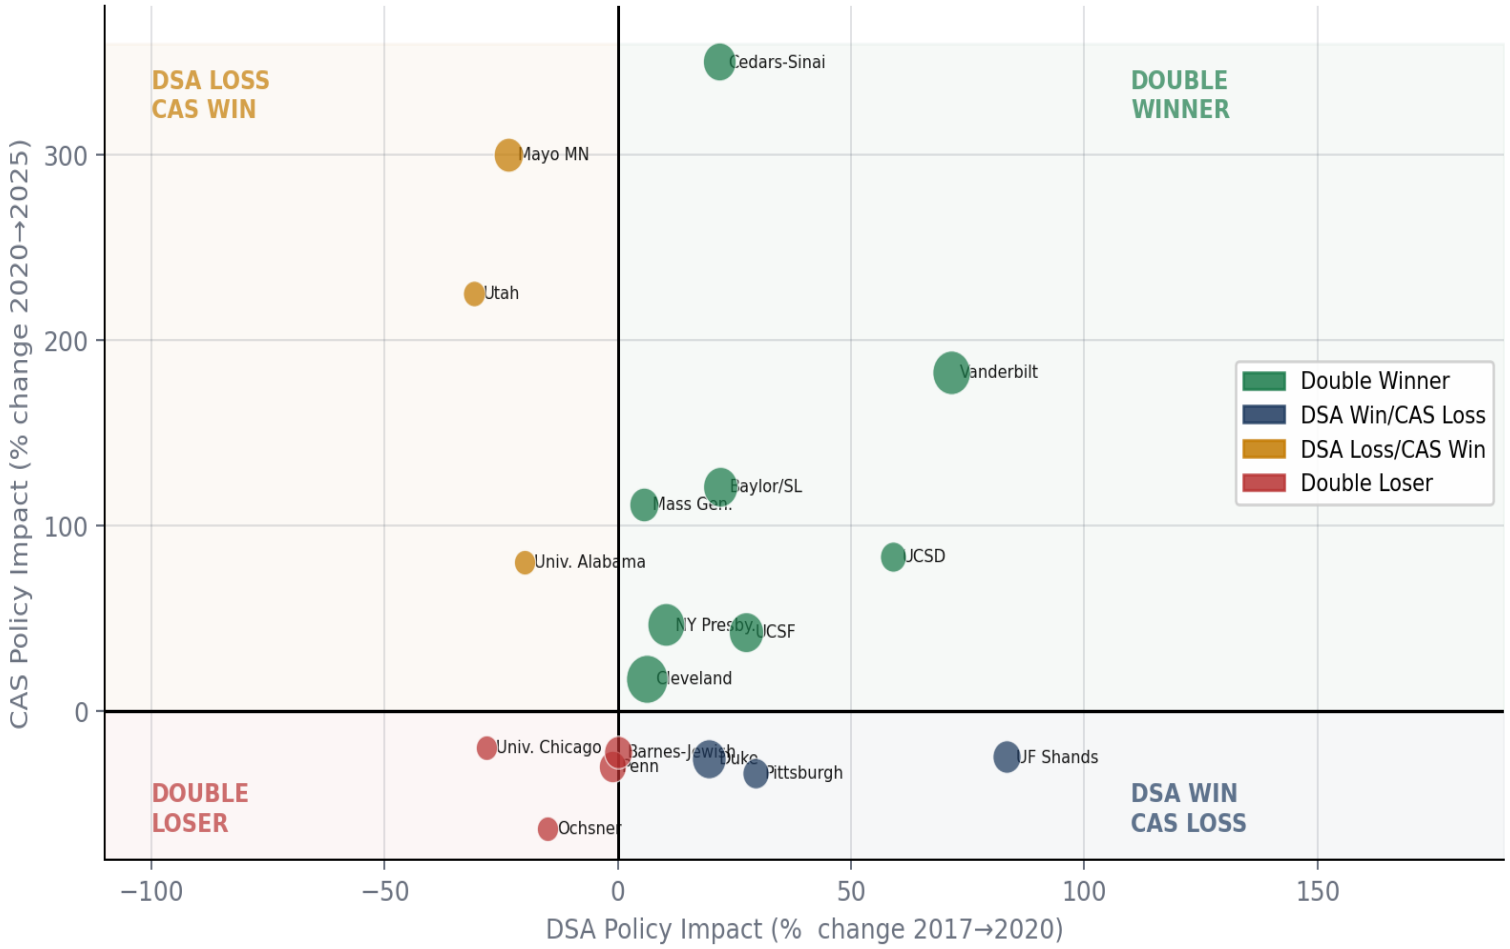

Key Policy Findings

- DSA removal: median waitlist time fell 9 days; transplant rate rose nationally; LOS increased 2 days (transport distance)
- **CAS (Mar 2023): acuity-first composite scoring. Waitlist mortality: 11.2% → 8.4% → 4.1%. Largest YoY volume jump on record.**
- Gini: 0.386→0.359→0.340. CV: 72.2%→67.5%→61.4%. Centers ≥33/yr: 23→31→35 (recomputed, Oct 2026 data). System measurably more equitable under CAS.
- Both reforms market-expanding: only 4 of 51 centers declined under BOTH policies (the Double Losers).

Policy Quadrant — All 51 Centers

Which programs won or lost under each allocation reform?

Double Winner (20)

Benefited from both reforms
Ex: Vanderbilt +384%, Cedars-Sinai +461%

DSA Win / CAS Loss (16)

Geographic expansion; lost on acuity
Ex: Duke −11% net, Pittsburgh −14%

DSA Loss / CAS Win (11)

Recovered under acuity scoring
Ex: Mayo MN +509%, Utah +125%

Double Loser (4)

Both reforms hurt — structural risk
Ex: Ochsner −69%*, Penn −31%
*Ochsner rebounding: 2026 pace ~23

Top Centers & Double Loser Profile

Center	2025 Vol	CAS Avg	Net Δ
Temple University	**178**	140	**+39%**
Vanderbilt	**149**	113	**+384%**
Cleveland Clinic	**143**	137	**+24%**
Duke	**104**	91	**−11%**
Baylor/St. Luke's	**102**	94	**+170%**
NY Presbyterian	**101**	109	**+62%**
Cedars-Sinai	**93**	86	**+461%**
UCSF	**89**	95	**+82%**
Jackson Miami	**85**	75	**+433%**
Mass General	**84**	68	**+123%**

DOUBLE LOSERS

Ochsner (LA) 31→10 avg **−69%**

Below quality threshold, but rebounding: 17 in Jan–Sep 2026 (~23/yr pace) vs 14 in 2025.

Penn/HUP (PA) 86→59 avg **−31%**

Temple (same city, #1 national) dominates on CAS urgency score; Penn loses intra-city share.

Barnes-Jewish (MO) 82→63 avg **−22%**

Midwest OPO geographic premium eliminated; acuity scoring doesn't compensate.

Univ. Chicago (IL) 21→12 avg **−42%**

Loyola in same metro — neither policy rewarded Chicago's geographic position.

Emory vs ALUA (Jan–Sep)

43rd
ALUA US rank (37th in '25)

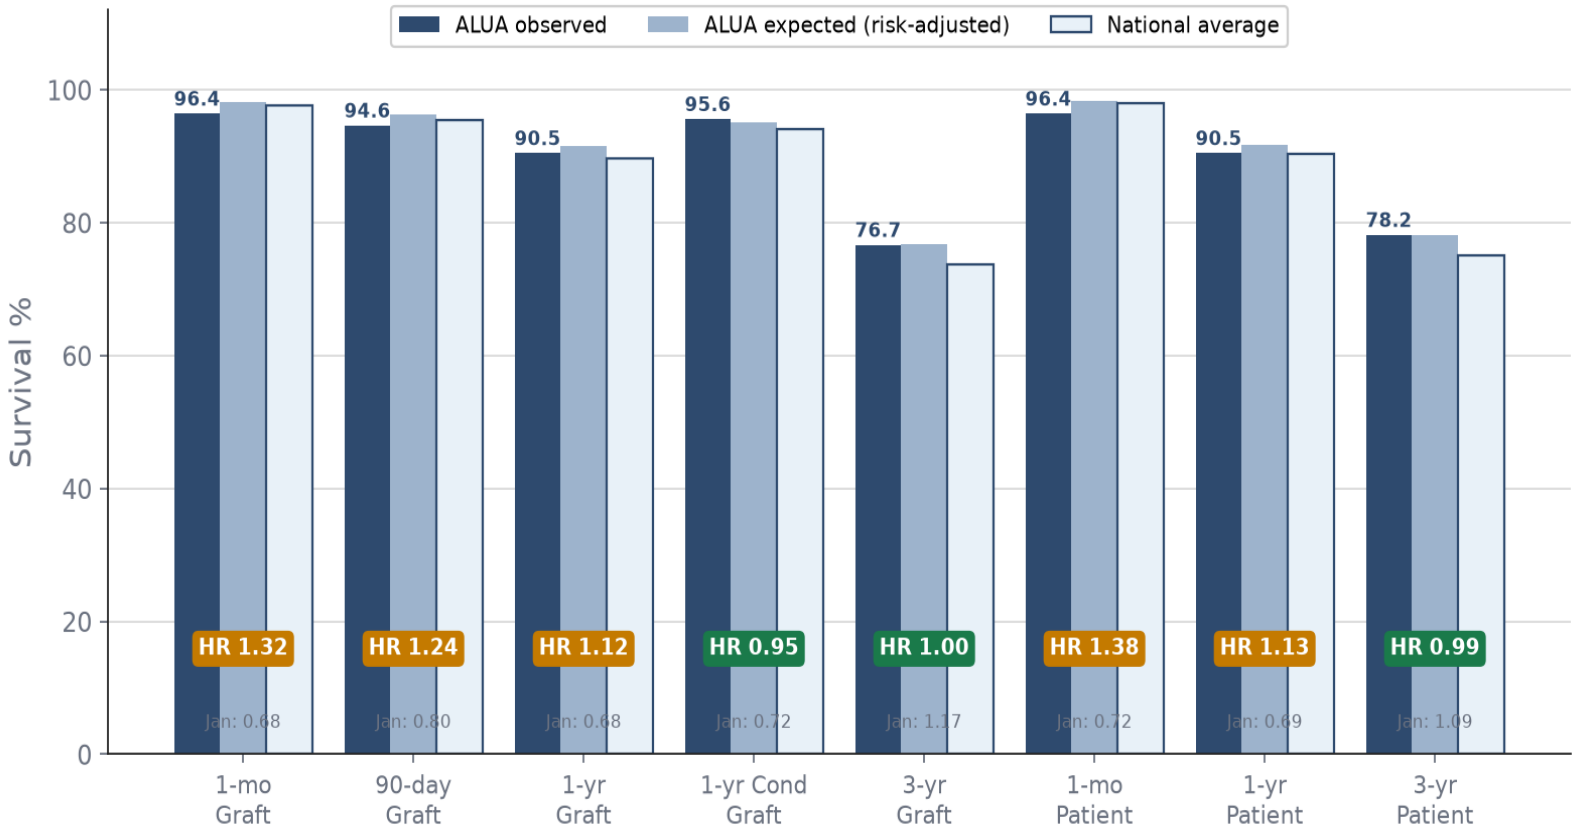

Not in dataset: MUSC, Methodist Memphis, Jewish Louisville, Cleveland Clinic FL, Wellstar MCG.

Regional Insights

- **Region growing fast: the 10 programs are on pace for ~621 in 2026 (+14% vs 544 in 2025), vs +4% nationally.**
- ALUA flat at ~31 (2025: 31) → regional share 5.7% → 4.9%; national rank 37th → 43rd of 54.
- Emory (Atlanta, ~150 mi): 52 by Sep is already a program record; pace ~69, more than 2× ALUA after matching it in 2020–24 (~21/yr each).
- Vanderbilt (Nashville, ~190 mi) is levelling off at ~144 but is still ~4.7× ALUA. Growth is now led by Tampa, Emory and Shands.

ALUA SRTR Outcomes — PSR July 2026

Cohort: Jan 2023–Jun 2025 · n=56 · Outcomes now at expected (Jan 2026 PSR: HR 0.69) · credible intervals remain wide

76.7%
3-yr Graft Survival (exp. 76.7%)

1.00
3-yr Graft HR [0.56–1.56]

5 obs / 4.26 exp
1-yr Graft Failures vs Expected

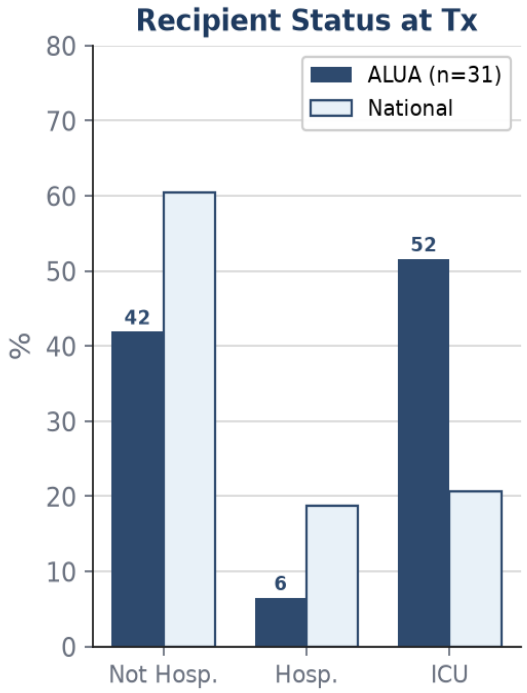

★ **90-day graft HR 1.24 (3 vs 2.03 exp.) · 1-yr conditional HR 0.95 — all HRs well below the MPSC threshold (2.25)**

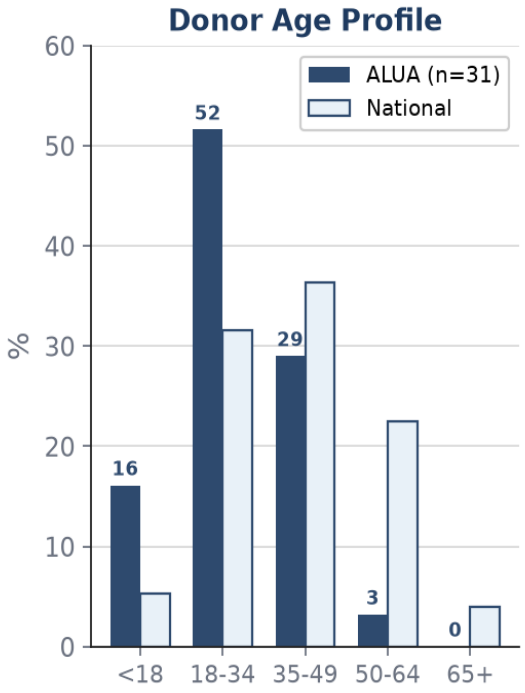

△ Jan → Jul 2026: 1-yr HR 0.69 → 1.13, survival 95.7% → 90.5%; the added failures are 2025 early-graft losses

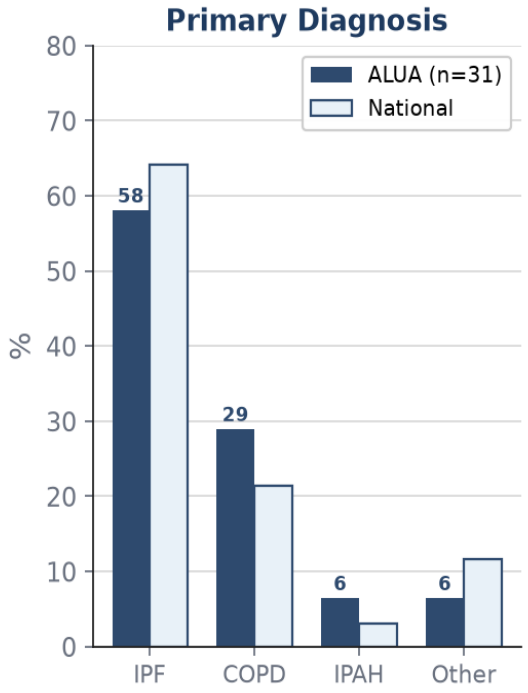

- National 1-yr: 89.8% graft / 90.3% patient — ALUA now at the national rate and within expected

ALUA Clinical Profile

Recipient & donor characteristics vs national benchmarks · Jan–Dec 2025 · n=31 · PSR July 2026

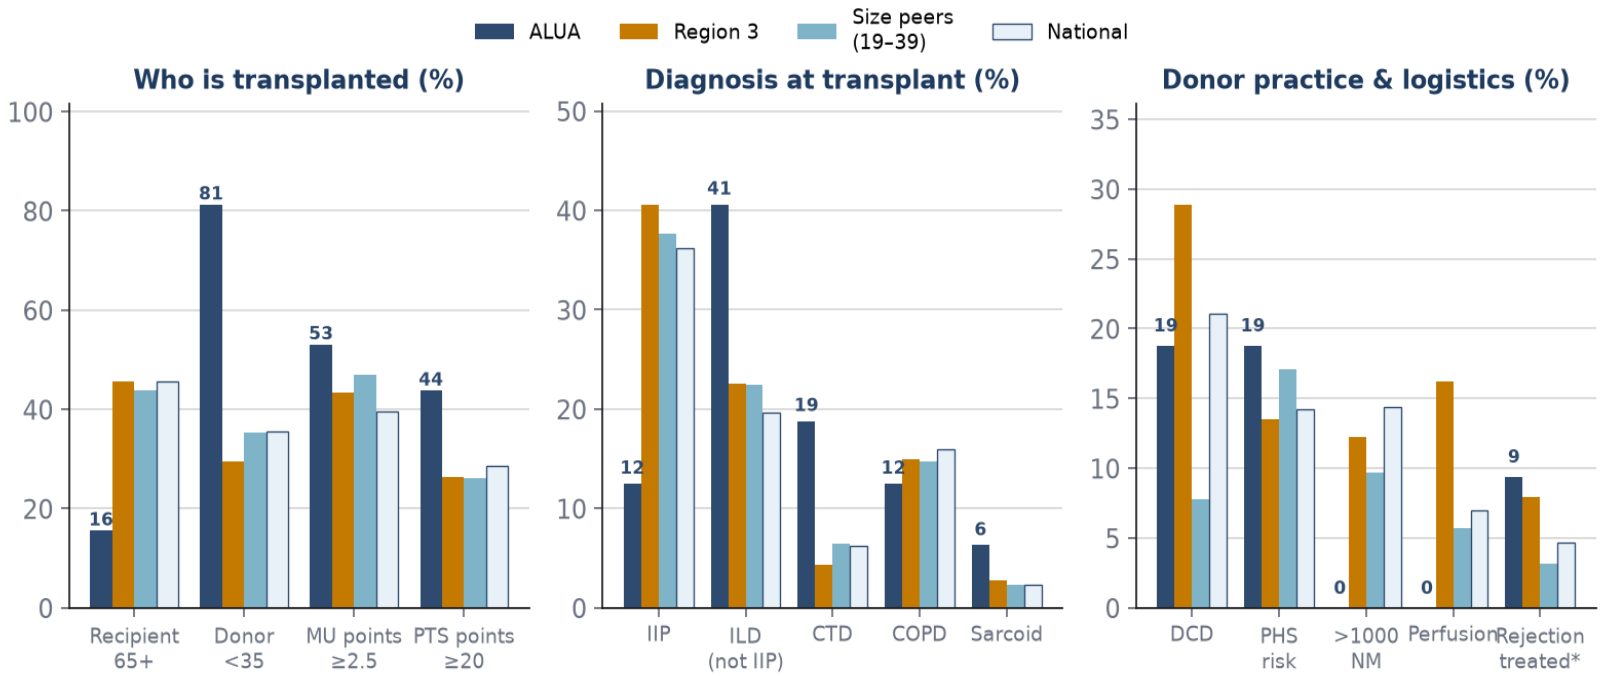

Clinical Insights

- **ICU at transplant: 51.6% vs national 20.7% (region 42.8%) — 2.5× national acuity intake, up from 46.2%. CAS incentivizes urgent patients; this raises early-failure risk.**
- Donor age: 51.6% aged 18–34 vs 31.6% nationally; 16.1% under 18; only 3.2% aged 50+ (national 26.5%). Young donors remain the main protective factor.
- Diagnosis: COPD 29.0% vs 21.4% national; IPF 58.1% vs 64.1%. Recipient BMI ≥36: 9.7% vs 1.2% national.
- Post-tx LOS: median 24 days vs 21 national (region 26). Median time to transplant 3.4 mo vs 1.3 national; 83.9% of donors from outside the DSA.

ALUA vs UNOS Benchmarks — Region 3, Size Peers, National

UNOS Benchmark Report Oct 2026 · transplants Jul 2025–Jun 2026 (n=32) · waitlist snapshot Sep 30, 2026 (n=11)

*acute rejection treated before discharge · UNOS Benchmark Report Oct 2026

32
Tx Jul '25–Jun '26 (US median 40)

6.4 h
Median ischemic time (US 9.8)

16%
Recipients 65+ (US 46%)

81%
Donors under 35 (US 36%)

9.4%
Treated rejection pre-discharge (US 4.7%)

0%
Machine perfusion (Region 3: 16%)

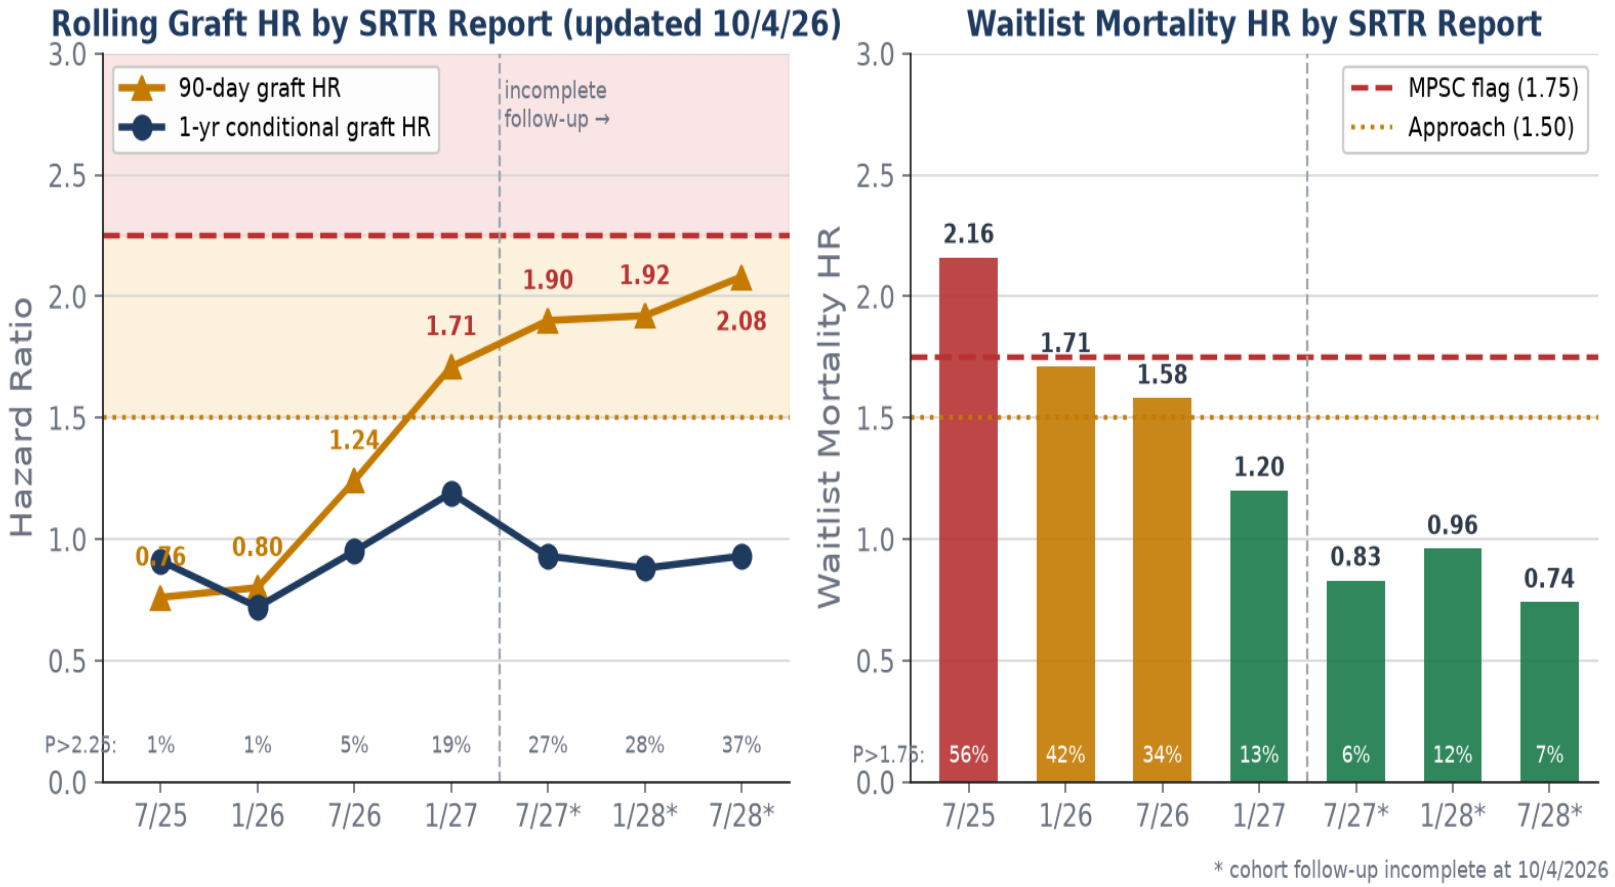

Size peers = Q2:19–39 transplants/yr (19 programs); Region 3 = 8 programs. MU = medical urgency; PTS = post-tx survival points.

Benchmark Insights

- **Young on both sides: recipients 65+ are 15.6% of ALUA transplants vs 45.7% nationally; donors under 35 are 81% vs 36% (no donors 50+). The waitlist is 9% aged 65+ vs 49% nationally — the largest untapped listing segment.**
- Distinct case mix: non-IIP ILD 40.6% + connective-tissue disease 18.8% + sarcoid 6.3% = 66% vs 28% nationally; IIP only 12.5% vs 36.2%. Urgency is high (MU points ≥2.5: 53% vs 40%) yet predicted post-tx survival is better (PTS ≥20: 44% vs 28%).
- Conservative logistics protect early outcomes but cap the offer pool: median ischemic time 6.4 h vs 9.8 national (14.0 Region 3); no donors beyond 1,000 NM (14% nationally); 100% ABO-identical; 0% machine perfusion vs 16% in Region 3.
- Watch: acute rejection treated before discharge 9.4% vs 4.7% nationally (3.2% size peers) — consistent with the 90-day graft signal. Recipient BMI median 29.3 vs 26.3; median LOS 21 d vs 20 (Region 3: 27).

Rolling SRTR HR Trend — Surveillance Update (Oct 4, 2026)

SRTR 7/26 confirmed at 90-day graft HR 1.24 (April projection 1.25); 1/27 cohort enters approach zone at 1.71 — early graft failure, not 1-yr survival

* cohort follow-up incomplete at 10/4/2026

⚠ APPROACHING FLAG — 90-DAY GRAFT

7/26 actual 1.24 → 1/27 1.71 (5 failures vs 2.1 exp.)
7/27*–7/28* tracking 1.90–2.08 | P(HR>2.25) → 37%
Approach zone 1.50–2.25 | MPSC flag >2.25

✓ WAITLIST MORTALITY RESOLVING

WLM HR 2.16 (7/25) → 1.58 (7/26) → 1.20 (1/27)
P(HR>1.75) 56% → 13%; 7/27*–7/28* at 0.74–0.96
PSR 7/26 (2024–25): pre-tx mortality 1.58 [0.68–2.84], tx-rate ratio 0.59 [0.44–0.76] — still carry 2024 trough

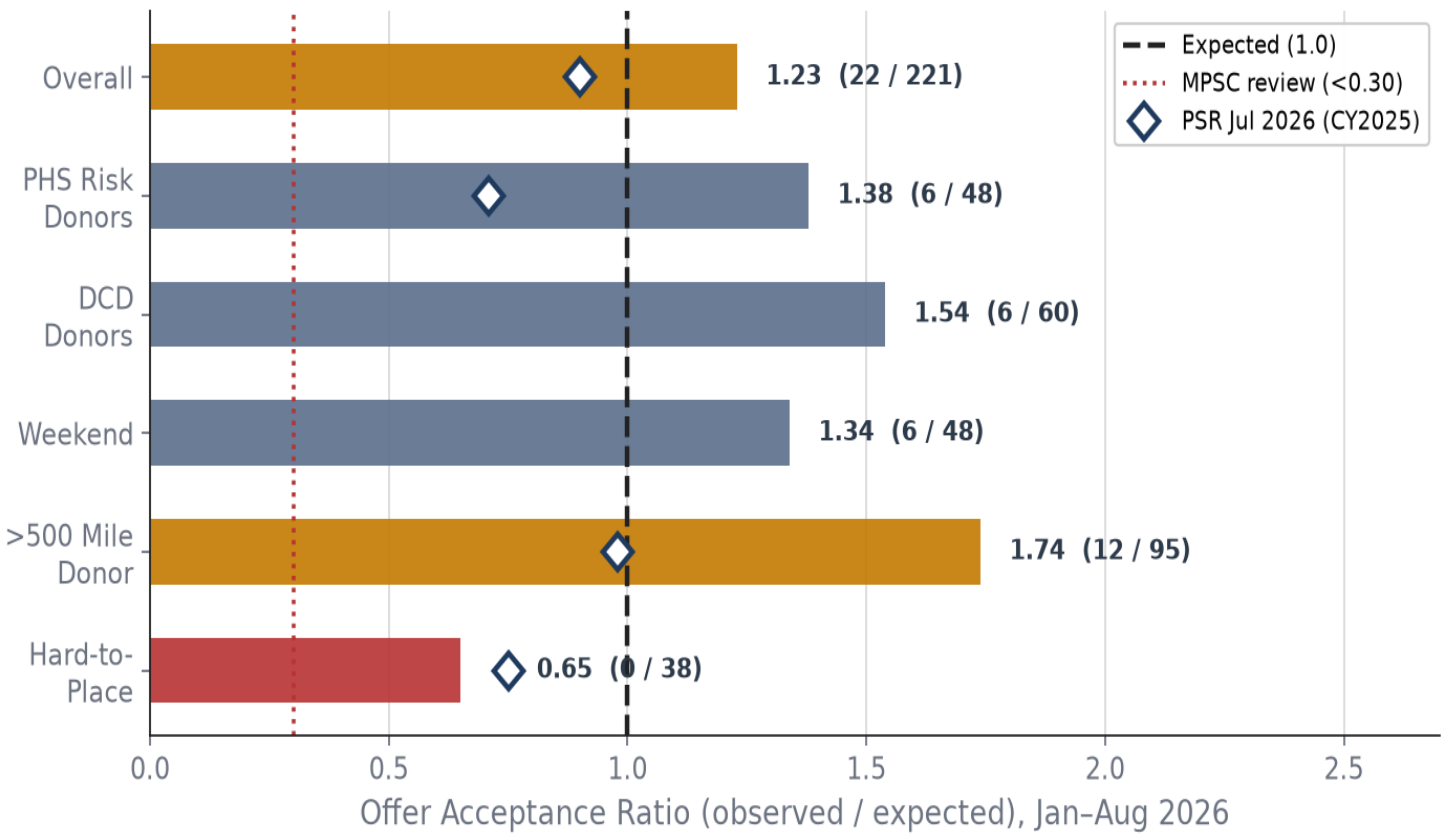

WHAT THE DATA SAY

1-yr conditional graft HR stays 0.88–1.19 — the signal is perioperative (≤90-day) failure
90-day failures: 2/16, 2/15, 1/17, 1/7 (H1'25→H2'26)
ICU intake 52% vs 20.7%; new surgeon from Apr '25

★ **SRTR 1/27 (Jan 2027) will be the first official report in the approach zone — case-review the 2025–26 early graft failures now**

ALUA Offer Acceptance — Lever Pulled (Jan–Aug 2026)

Jan–Aug 2026: 221 offers · 22 accepted · ratio 1.23 — up from 0.90 (CY2025, PSR Jul 2026) and 0.62 (PSR Jan 2026)

Acceptance Strategy Analysis

Overall ratio: 0.62 → 0.90 → 1.23

PSR Jan '26 → PSR Jul '26 (CY2025) → Jan–Aug '26

Accepted 22 / 221 offers (Jan–Aug '26)

CY2025: 31 / 526, 34.5 expected, 0.90 [0.62–1.24]

Hard-to-place: 0.65 (CY2025: 0.75)

0 of 38 accepted — still deferred

>500 miles: 1.74 (CY2025: 0.98)

12 of 95 — distance range has been expanded

PHS risk 1.38 (was 0.71) · DCD 1.54

Both above expected — broader donor acceptance

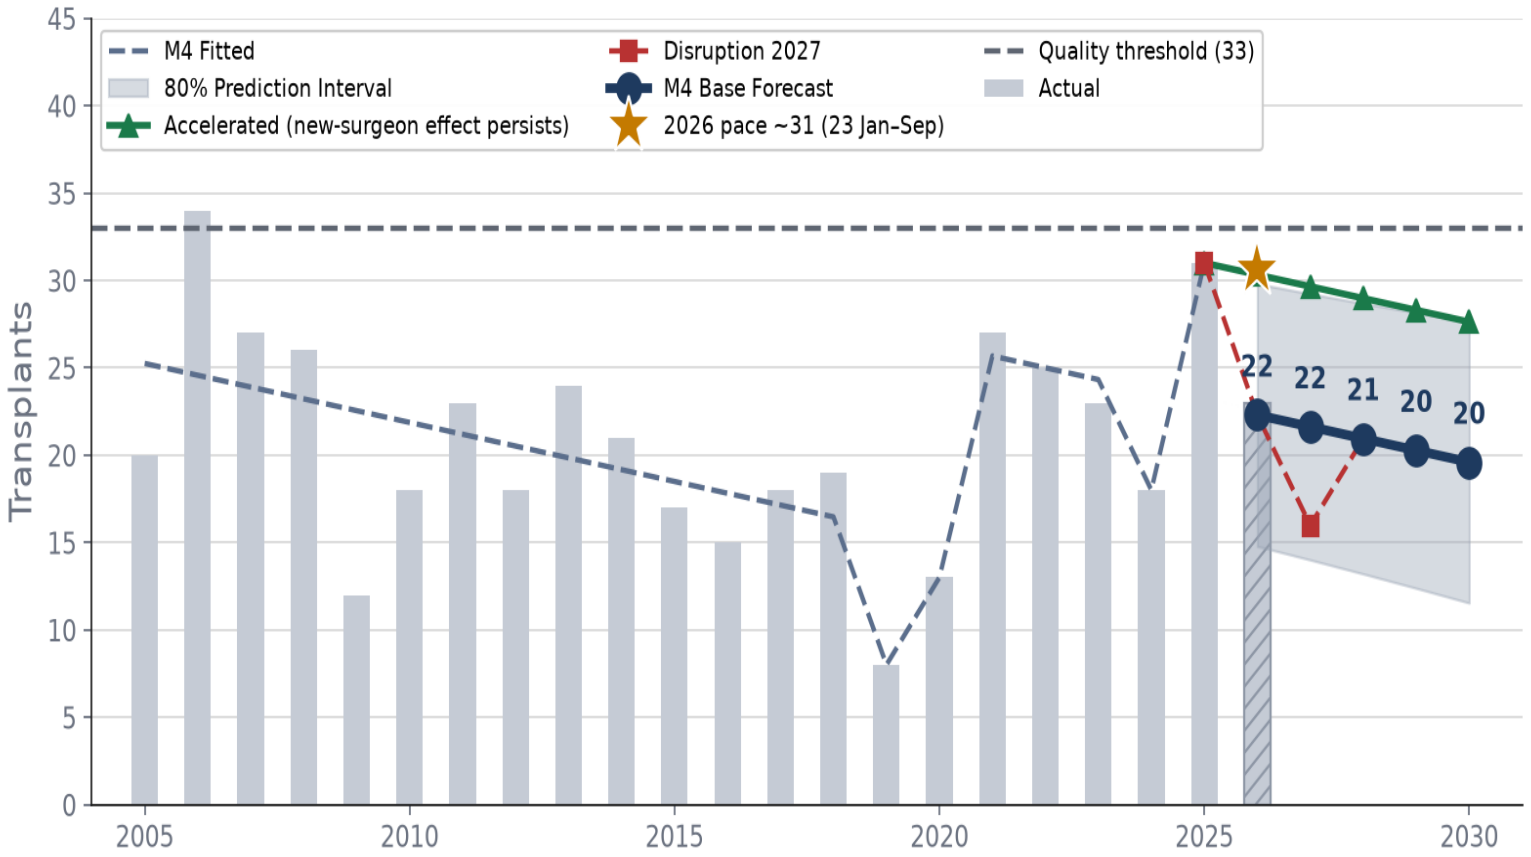

MPSC trigger: <0.30

ALUA at 1.23 — no regulatory risk

Next constraint is listings, not acceptance: active waitlist fell 13 → 8 (Jul '24 → Jul '26); 16–17 transplants per half-year ≈ removals. Grow referrals; watch 90-day outcomes as distance/DCD acceptance widens.

ALUA Volume Regression & Forecast 2026–2030

M4 parsimonious structural model · AIC=70.6 · Adj R^2=0.448 · Lowest AIC of 4 models

Model Comparison

M1: Linear	−0.041	80.3
M2: Quadratic	0.199	75.7
M3: Full struct.	0.327	75.7
M4: Best ★	**0.448**	**70.6**

M4 Forecasts: Base vs Accelerated

2026: base 22 (PI 15–30) · accel. 30

2027: base 22 (PI 14–29) · accel. 30

2028: base 21 (PI 13–29) · accel. 29

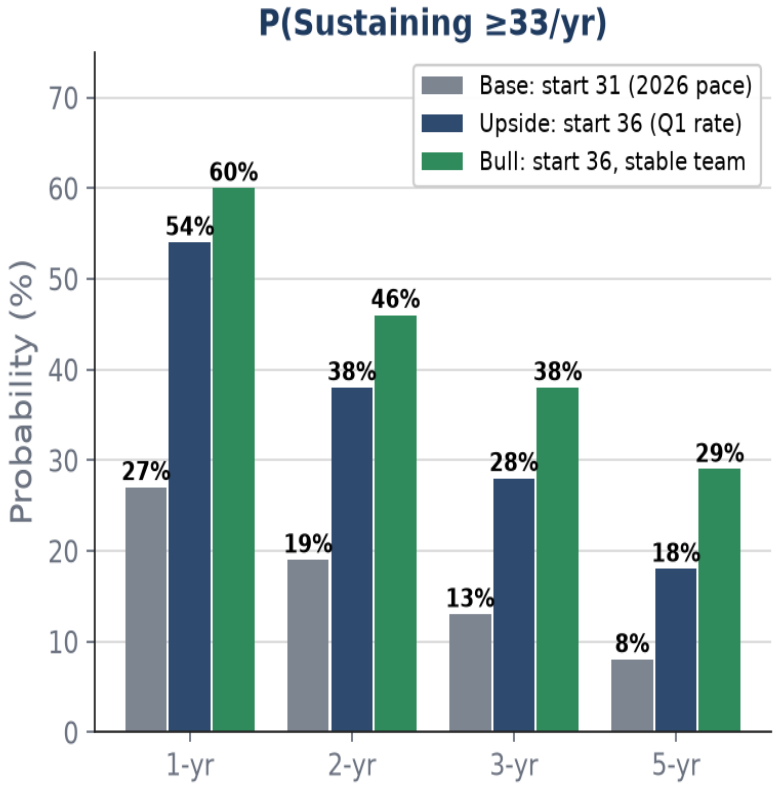

2029: base 20 (PI 12–28) · accel. 28

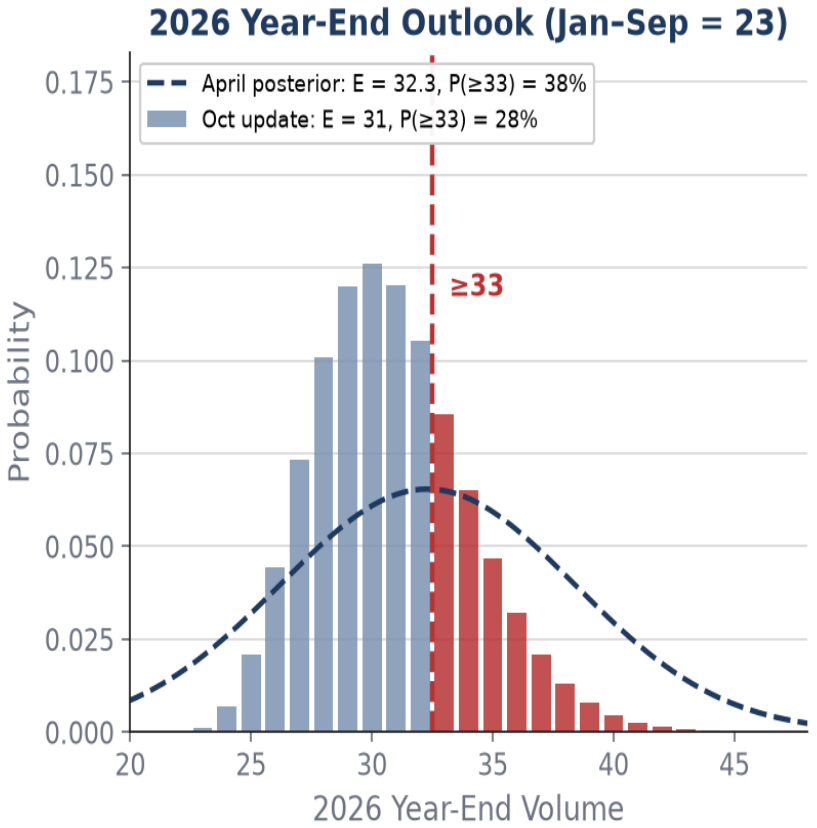

2030: base 20 (PI 12–28) · accel. 28

★ 2026 pace ~31 (23 by Sep): tracking accelerated path

Monte Carlo Probability & Bayesian Update

100k simulated paths · Regime-switching model · Year-end update with Jan–Sep 2026 actuals

P(Sustaining ≥33 cases/yr)

Scenario	1yr	3yr
Base (start 31)	27%	13%	8%
Upside (start 36)	54%	28%	18%
Bull (36, stable)	**60%**	**38%**	**29%**

2026 Year-End Update

Given Jan–Sep 2026 = 23 cases (Q1 = 9):

April: E[vol] = 32.3 | P(≥33) = 38%

Oct: E[vol] = 31 (80%: 27–35) | P(≥33) ≈ 28%

Needs ≥10 in Q4 (best quarter so far: 9)
Retaining surgical team = highest-leverage action

Key Recommendations & Surveillance Priorities

Actionable priorities derived from quantitative analysis of SRTR PSR, rolling data, and volume models

1 **90-Day Graft Failure Review Before SRTR 1/27 (Jan 2027)**

7/26 confirmed at 1.24; the 1/27 cohort is at 1.71 (5 early failures vs 2.1 expected), later windows 1.9–2.1. Case-review every 2025–26 ≤90-day failure now.

2 **Retain Surgical Team Through April 2027**

Disruption probability is the dominant model parameter. Two years at ~31/yr support a durable new-surgeon effect; a disruption resets to ~22.

3 **Shift From Acceptance to Listings**

Acceptance ratio 1.23 (>500 mi 1.74, DCD 1.54) — the April lever is pulled. Growth now depends on listings: 65+ candidates are 49% of the national list but 9% of ALUA's.

4 **Monitor Acuity-Adjusted Metrics**

HRs are risk-adjusted, but ICU intake is now 2.5× national (51.6%) and distance/DCD acceptance just widened. Ask SRTR whether the model under-adjusts at this acuity.

5 **Q4 2026 = Year-End Checkpoint**

Needs ≥10 Q4 cases for 33 in 2026 (P ≈ 28%); realistic ~31. Set 2027 target ≥33; track Emory and Vanderbilt share.

Summary

National Market

3,083 transplants (2025), +158% since 2005; 2026 Jan–Sep 2,397 (pace ~3,196, +4%). Both reforms improved equity and access; CAS produced the largest single-year jump.

Policy Impact

Only 4 of 51 centers lost under both reforms. CAS rewards acuity-optimized programs. Southeast volume is growing fast (+14% 2026 pace), led by Vanderbilt, Emory, Tampa and Shands.

ALUA Current State

PSR Jul 2026: 1-yr survival 90.5% (expected 91.7%), HR 1.13 — normalized from Jan's 0.69. 90-day graft HR 1.24; rolling 1/27 cohort at 1.71 (approach zone) on early failures. WLM resolving (1.20).

ALUA Trajectory

2026: 23 by Sep, pace ~31 — second year at the 2025 level. Offer acceptance 0.62 → 0.90 → 1.23; constraint is listings. P(2026 ≥33) ≈ 28%. SE share 5.7% → 4.9%.
